

# 10MWh energy storage price

#### **Overview**

A typical lithium-ion system today ranges between \$180,000-\$280,000 per MWh installed, meaning your 10 MWh project could land anywhere from \$1.8 million to \$2.8 million. But hold on – that's like quoting "car prices" without specifying make or modeHow much does energy storage cost?

Let's analyze the numbers, the factors influencing them, and why now is the best time to invest in energy storage. \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels. For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh.

How much does a 100 kWh battery cost?

A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?

Battery pack - typically LFP (Lithium Uranium Phosphate), GSL Energy utilizes new A-grade cells.

How much does a 100 kWh solar system cost?

For example, in 2022, a 100 kWh system could cost \$45,000. By 2025, similar systems could sell for less than \$30,000, depending on configuration. Why invest now?

.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

#### Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).
