

8MWh all-vanadium redox flow battery energy storage project

Overview

Discover Sumitomo Electric's pioneering 8MWh VRFB project in San Diego, featuring UL1973-certification and innovative microgrid capabilities. Learn how this demonstration project achieves 99% availability while supporting grid reliability and clean energy integration."Can vanadium redox flow battery storage improve grid management?

Sumitomo and SDG&E's 2MW/8MWh redox flow battery system. Credit Sumitomo Utility San Diego Gas and Electric (SDG&E) and Sumitomo Electric (SEI) have launched a 2MW/8MWh pilot vanadium redox flow battery storage project in California to study how the technology can reliably integrate renewable energy and improve flexibility in grid management.

Does Sumitomo Electric have a vanadium redox flow battery?

Sumitomo Electric has been proceeding with a vanadium redox flow battery (VRFB) pilot project in coordination with San Diego Gas & Electric, stemming from a partnership between Japan's New Energy and Industrial Technology Development Organization (NEDO) and the California Governor's Office of Business and Economic Development (GO-Biz).

What is a vanadium redox battery?

A vanadium redox battery is a type of flow battery where vanadium ions are used in both half-cells. This eliminates the cross-contamination faced by other flow battery technologies. Furthermore, this battery system has a high energy efficiency due to solid state reaction processes occurring during charging and discharging (Parasuraman et al., 2013).

How to extend the cycle life of vanadium redox flow batteries?

T.S. Zhao In this work, the cycle life of vanadium redox flow batteries (VRFBs) is extended by resolving the inevitable loss of capacity and energy efficiency after long-term cycle operation. The electrolyte concentration, volume, and valence are rebalanced by mixing the electrolyte as well as adding a quantitative amount of a reducing agent.

Are vanadium redox flow batteries suitable for solar PV applications?

Vanadium redox flow batteries are highly suitable for solar PV applications due to their high capacity, less sensitivity to depth of discharge, low self-discharge, and their ability to provide independent energy and power. Conclusion: Energy storage systems, including vanadium redox flow batteries, are not all perfect, and they are more expensive than other batteries.

How long will a redox flow battery last?

The battery is expected to retain a capacity rate of 90% or more for 20 years in the electricity market. Sumitomo Electric, a unit of Japanese conglomerate Sumitomo Corp., has unveiled the results of tests on a vanadium redox flow battery system it deployed in 2017 at a facility owned by US utility SDG&E in Bonita, near San Diego, California.
