

Analysis of the reasons for the power outage of communication base stations

Overview

Can a base station predict a power outage?

Though each single power outage of one given base station is truly hard to predict precisely, the statistical long-term power outage trends (e.g., in every year) can have a very similar pattern (e.g., a base station built in cold area may suffer from several power outages due to the heavy snow every year).

Why do cellular communication base stations need a battery alloc?

Current cellular communication base stations are facing serious problems due to the mismatch between the power outage situations and the backup battery supporting abili-ties. In this paper, we proposed BatAlloc, a battery alloca-tion framework to address this issue.

Why should a telecom network be prepared for a power outage?

It is also possible to shut down certain equipment during times of lower site trafic to simply save on energy consumption. Preparing your network for power outages caused by weather and natural disasters with advanced technology will increase the resilience, reliability, and eficiency of your telecom sites.

What causes a power outage?

Multiple factors can compromise the seemingly stable main power supply. Equipment failures, damage to transformers, distribution lines, or substations can all trigger outages. Natural phenomena such as storms, floods, and lightning strikes pose significant threats.

How can predictive analytics help network operators prevent power outages?

Leveraging predictive analytics, network operators can proactively anticipate potential power outages. This foresight enables them to implement mitigation strategies such as load balancing and network redundancy, minimizing service disruptions and ensuring seamless network communication.

How long does a battery last in a cellular communication base station?

for a new battery cell. According to the industry standard, the battery used in cellular communication base station is designed to provide power supply for about 10 to 12 hours and we thus set to 10. The second low voltage disconnect

Analysis of the reasons for the power outage of communication bas

Machine learning for base transceiver stations power failure ...

Base Transceiver Stations (BTSs), are foundational to mobile networks but are vulnerable to power failures, disrupting service delivery and causing user inconvenience.
