

Austria s wind power system

Overview

Although Austria is surrounded by land and is really hilly topography, meteorological preconditions permit the utilization of wind power. First calculations on the basis of wind measuring data assessed at the meteorological stations in the early 1980s rendered the surprising result of annually approx. 6,600 to 10,000.

Back in the 1980s, there were huge private wind measurements and experiments with smaller plants. In 1994, initiated by Councilor Waltner, 110 (kW) was.

How much wind energy does Austria produce in 2021?

To read more about Austria's wind energy sector in 2021, read their chapter in the 2022 Annual Report. Total wind power capacity is 3,560 MW. Wind power capacity in Austria increased by 315 MW in 2022. Austria produces 8.2 TWh from wind energy, which accounts for 11.1% of the country's electricity consumption.

Does Austria have wind power?

Although Austria is surrounded by land and is really hilly topography, meteorological preconditions permit the utilization of wind power.

How many wind turbines are there in Austria?

Austria currently has 1,307 wind turbines with a total output of 3,120 MW. The

€143 million project is a major upgrade from the previous wind plant on the same location, which were built 20 years ago with turbines placed a mere 150 meter high. "We can set up more systems in this area than before," said company CEO Lukas Püspök.

Why has Austrian wind power increased by 315 MW?

Austrian wind power increased by 315 MW. Many of the projects are still part of a queue caused by inadequate support scheme conditions in recent years and lengthy approvals. Since winter 2022 the new support scheme EAG (Erneuerbaren-Ausbau-Gesetz) is in place. The first wind power plant subsidized by this scheme will be erected earliest next year.

How much does wind research cost in Austria?

In the last twelve years, according to surveys by the Austrian Energy Agency, the average amount of wind research funding from the public sector was 1.15 million euros per year; in the last two years the funding average has doubled (2.3 million euros).

What are the hidden costs of wind power in Austria?

The hidden costs of wind power in Austria are currently not quantified. Most of the property owners are farmers. They have an additional source of income by leasing their land to the wind park operator. The prices paid for property leases for wind turbines are many times more than would normally be earned by farming the property.
