

Bangladesh Solar Smart System

Overview

SOLshare has successfully piloted the world's first ICT-enabled peer-to-peer electricity trading network for rural households with and without solar home systems in Shariatpur, Bangladesh.

Based in Dhaka, SOLshare is a joint venture with the German consulting company MicroEnergy International GmbH. The.

Bangladesh has a population of 163 million (or 29 million households). According to the International Finance Cooperation, the electrification rate is 41%, with 17 million households being off-grid. Of the off-grid population, the vast majority is concentrated in rural.

The SOLshare electricity trading network reduces greenhouse gas emissions from energy generation. It replaces unsustainable.

Along with its implementation partner, the NGO UBOMUS, its financing partner IDCOL and research partner United International Universit-Centre for Energy Research, SOLshare combines solar home systems and centralized mini-grids to enable more rural households to access renewable electricity at a lower cost. How many solar home systems are installed in Bangladesh?

As of May 2017, over 4 million solar home systems had been installed, impacting more than 12 percent of the entire Bangladeshi population. The Solar Home Systems (SHS) initiative began in January 2003 and was facilitated by the government-owned Infrastructure Development Company Limited (IDCOL).

Why did Bangladesh start a solar home system?

Rather than waiting for communities to connect to the national grid, the Bangladesh government began the Solar Home System (SHS) program, under the leadership of Infrastructure Development Company Ltd. (IDCOL), to mobilize the private and non-governmental sectors to find ways to rapidly bring clean electricity services to the people.

Why is solar power important in Bangladesh?

The focus was on providing basic electricity coverage to improve the life of rural regions and low-income households in Bangladesh. As of May 2017, over 4 million solar home systems had been installed, impacting more than 12 percent of the entire Bangladeshi population.

Why are solar home systems so expensive in Bangladesh?

Current solar home systems are limited in capacity and continue to remain prohibitively expensive for a large portion of the 65 million people who do not have access to the grid in Bangladesh. As a result, they rely on costly and unhealthy alternatives like diesel generators and kerosene lamps.

Will Bangladesh switch to solar power?

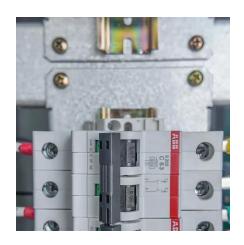

At the time, Islam's home was still powered by SHS. But if grid connections become available, he said, "we will switch as well." Bangladesh's grid is still 98% powered by fossil fuels, primarily gas and oil, but solar electrification efforts are now focused on larger solar power facilities that will supply the national grid.

Are Solar Homes a viable option for off-grid households in Bangladesh?

Of the off-grid population, the vast majority is concentrated in rural Bangladesh where the electrification rate dips to 28%. Individual solar home systems are limited by their initial capacity and cannot serve more or any larger electricity consuming devices.
