

Base station power cabinet has heavy load

Overview

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

What is a base load power station?

During periods when there is no peak power demand, there are some power stations that constantly run and provide power to the grid, known as base load power stations. Nuclear power stations fall into this base load power station category. These stations cannot be easily stopped or restarted.

Why are base stations important?

In modern communication networks, base stations, as core infrastructure, are crucial for stable operation.
