

Base station power cabinet how much to turn

Overview

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

How long should a base station last?

Base Stations should have a very long life span, even if the power management modes we offer are not used, however. Using the power management features will increase the life span further by leaving the laser and/or rotor disabled (depending upon the mode) when inactive. Feel free to share this if you like.

Should I Turn Off my base stations?

If you activate your base stations once a day or less, I would turn them off. If you often jump in and out of VR sessions, I'd keep them running. It's similar to HDD motors, as in they are happy to run continuously. But constant on/off can become a problem. Of course. Things don't wear down when they're off.

How many times a day should a base station be powered up?

If it depends on the usage, what is the estimated threshold (e.g. if the Base Stations are powered up 10 times a day it is better to keep them running instead). Please let me know if I can post your reply on Reddit to help other users as well. Thanks a lot! Steam Support response: Thanks for writing in with your questions.

Why are base stations important?

In modern communication networks, base stations, as core infrastructure, are crucial for stable operation.

Why do lighthouse base stations wear so much?

I believe this myth comes from the fact that the Lighthouse base stations use Fluid Dynamic bearings, which usually have an increased wear when spinning up or down. But that wear has either been reduced or it just doesn't matter for the amount of spin ups and spin downs that the base stations go through.

Base station power cabinet how much to turn

Should I leave my Base Station on or turn them off? More in

You don't need to unplug them, just use the steamvr base station settings to let steamvr turn off the base stations. It will also turn them on when launching steamvr.
