Why are batteries so expensive?

There are two main drivers. One is technological innovation. We're seeing multiple new battery products that have been launched that feature about 30% higher energy density and lower cost. The second driver is a continued downturn in battery metal prices. That includes lithium and cobalt, and nearly

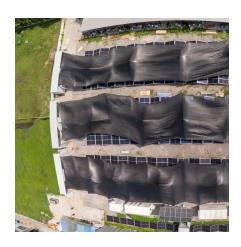

60% of the cost of batteries is from metals.

Why did battery prices drop 20% this year?

This year, especially, was huge for the battery industry, with prices dropping 20% to \$115 per kilowatt-hour. Factors like lower component prices, cell overproduction and burgeoning chemistries like lithium-iron-phosphate drove the price drop this year, as per the report. Here's more from BloombergNEF:
