

# Cameroon power generation and energy storage project prices

### **Overview**

What is the current energy production in Cameroon?

Scientific articles and investigative reports on energy production in Cameroon have enabled an assessment of the current electrical energy production. The 2035 production estimate is based on the Energy Sector Development Projects (PDSEN) report in Cameroon. The cur-rent production is estimated at around 1600 MW. Considering the ongoing.

How much money does Cameroon need for energy projects?

The Cameroonian government states that Cameroon needs almost 2000 billion euros to finance its energy projects. These funds will support the construction of the Limbé gas power plant (350 MW), the Grand Eweng, Chollet, Kikot, Katsina Ala (285 MW), and Menchum (72 MW) hydroelectric dams, among others.

Will Cameroon produce 5000 MW by 2035?

However, by 2020, pro-duction had only reached 1040 MW, leading Cameroon to devise a new na-tional energy sector development strategy targeting 5000 MW by 2035. This paper provides an overview of the current state of energy production and projects future output by 2035.

How can Cameroon achieve 5000 MW energy production?

To achieve the targeted energy production of 5000 MW, it is advisable to take steps to avoid certain obstacles, similar to those encountered in Cameroon's ini-tial programs. The potential obstacles impacting this objective are listed in Table 6 below: Table 6. Possible obstacles. Lack of proper road infrastructure for site access.

How was Cameroon's energy crisis analyzed?

The methodology for analyzing the causes of Cameroon's energy crisis involved visiting hydroelectric sites to examine the production systems of

current power stations and the plans for new ones.

Will Cameroon have a solar power plant?

The Maroua and Guider power plants, Cameroon's first public solar pro-ject with a combined capacity of 30 MW, were commissioned by MINEE in September 2023. Additionally, a 20 MW solar power plant is planned for the city of Garoua.
