

Can battery inverters be used as outdoor power supplies

Overview

What is a battery in an inverter used for?

They are used to power ATMs, hospital and laboratory equipment, traffic lights, etc. Batteries, therefore are a very important component of inverters. The DC is drawn from the batteries and converted to AC by the inverter for use in appliances. Conversely, the batteries are charged by being plugged to power source.

Do inverters need batteries?

Batteries form a vital part of inverters as an inverter's life, and its functioning depends on them. An inverter converts the DC drawn from batteries into AC. Apart from portable inverters that come with a built-in battery, batteries are generally sold separately. As such, one needs to buy and install batteries separately.

Can inverters be installed outside?

As a rule, inverters designed for outdoor use may be installed either outdoors or indoors, however indoor inverters can only be installed indoors. The great majority of grid-tied or string inverters available today are designed for outdoor installation.

Which batteries should I buy for my inverter?

Generally, users are advised to purchase and install branded, ISO- or SON-certified batteries for their inverters. On the basis of their maintenance needs, batteries are classified as either Flooded or Wet Cell lead-acid batteries and Sealed Lead-Acid (SLA) or Gel Cell batteries. The former needs maintenance, while the latter are maintenance-free.

Do inverters have battery protection technology?

Except for locally made and non-branded inverters, all inverters have battery protection technologies which protect the batteries from damage,

overheating, overcharging, deep discharge and misplacement of the battery terminals. They also have displays, LED lights and alarms that show and inform the user of the state of the battery.

Can a grid-tied inverter be installed outside?

Like most electronic devices, inverters operate more efficiently at cooler temperatures. While most grid-tied inverters are designed for outside installation, they should not be mounted in direct sunlight, as this will degrade their efficiency. In addition to the lost output, the lifetime of the unit is likely to be shortened.
