

# Canadian lithium power storage

#### **Overview**

May 7, 2025 – With 278 lithium-ion units now drawing and storing power from Ontario's grid, the Oneida Energy Storage Project has officially entered commercial operation, becoming the largest battery energy storage facility in operation in Canada, and among the largest globally. What is Canadian energy storage?

The blueprint for Canadian energy storage. Located in Haldimand County, Ontario, Oneida Energy Storage is a fully operational, 250 MW/1,000 MWh lithium-ion battery energy storage facility. It represents Canada's largest operational energy storage facility, and is amongst the largest energy storage projects globally.

Why is a lithium-ion battery chemistry important?

Moreover, it's important for communities to have confidence in these projects. In terms of current BESS projects in Canada to date, most are lithium-ion based battery chemistries. Lithium-ion systems are crucial to provide responsive and flexible power to the grid.

Why are lithium ion systems important?

Lithium-ion systems are crucial to provide responsive and flexible power to the grid. They can help to ease constraints in areas where the grid is operating at its full capacity, balance the intermittent nature of renewable assets, and provide more consistent and cost-effective production of other generation types, such as nuclear.

Which battery is better - lithium ion or lead-acid?

Lead-acid batteries are a more affordable option, but they come with a shorter lifespan and lower efficiency compared to lithium-ion. They're best suited for backup power in emergencies or areas with minimal energy storage needs. 3. Flow Batteries Flow batteries are known for their scalability and long cycle life.
