

Cape Verdean island solar power generators are unscrupulous

Overview

Does Cape Verde have solar power?

Like many African countries, Cape Verde's tropical location has good potential for solar photovoltaic (PV) electricity. One study suggests that the solar PV capacity potential is more than double the currently installed electrical generating capacity. Most of the potential development is on the densely populated island of Santiago.

How can Cape Verde cope with water and electricity shortages?

To cope, the country must either import more expensive fuel or invest in renewable energy solutions such as wind and solar power – an area where Cape Verde has great potential but still faces challenges in large-scale implementation. Water and electricity shortages in Cape Verde are not separate issues—they fuel each other in a vicious cycle:.

Why does Cape Verde have a poor energy system?

Cape Verde has a fragile energy system that relies heavily on imported fossil fuels. The rapid growth of the tourism industry, combined with increasing urbanization, has put additional strain on the power grid, resulting in frequent blackouts and rising electricity costs.

What will Cape Verde's new solar plant do?

The new solar plant will make Cape Verde one of the leading nations in the use of renewable energy within the region thus laying the foundation for what could be a more sustainable form of energy besides the traditional dependence on fossils. Does Cape Verde have a wave energy potential?

In the case of Cape Verde, there is one study evaluating the wave energy potential which highlights the resource available, particularly for the northern

islands, such as São Vicente . Unfortunately, the study identifies the wave resource to match that of the wind.

What technology could be integrated into Cape Verde's electricity generation offering?

Another technology that could be integrated into the electricity generation offering is the country's desalination systems. Many of Cape Verde's communities depend partially, or entirely, on these for drinking water.
