

# Chile 5G communication base station wind power project

#### **Overview**

Who is developing a wind power project in Chile?

The power project is being developed by Colbun, a utility company in Chile. Credit: Hitachi Energy. The construction for an expansion to 996MW is estimated to begin in H2 2025. Credit: Thorsten schier via Shutterstock. The 816MW Horizonte wind power project is located in the Antofagasta region of Chile. Credit: FairWind.

How will a 5G base station affect energy costs?

According to the mobile telephone network (MTN), which is a multinational mobile telecommunications company, report (Walker, 2020), the dense layer of small cell and more antennas requirements will cause energy costs to grow because of up to twice or more power consumption of a 5G base station than the power of a 4G base station.

Why is Chile building a new power line?

High-voltage transmission towers in the Atacama Desert in northern Chile. A new 1,342-kilometre power line is being planned to help connect solar and wind energy projects to the country's grid. (Image: Jon G. Fuller / Alamy) Chile is set to build its longest power transmission line, as it looks to support its transition to clean energy.

Can EMC communicate with a 5G network?

However, the communication operator builds the BS to complement the 5G signal, and the establishment of a communication BS does not mean the establishment of a dedicated power wireless network. EMC can also communicate by accessing a normal 5G network but at a reduced reliability and transmission rate.

What is the largest wind farm in Chile?

Credit: FairWind. The Horizonte wind farm located in Chile's Antofagasta

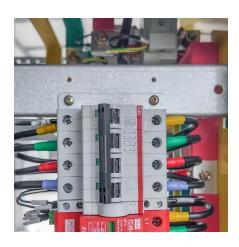

region, will have an initial capacity of 816MW. It is on the track to become the largest wind farm in Chile and the second largest in Central America. Colbun, a sustainable, secure, and competitive energy solutions provider, is the owner and developer of the project.

How can network densification improve the capacity of 5G networks?

Network densification, one of the key technologies in 5G, can significantly improve the network capacity through the installation of additional cellular small cell base stations (SCBSs) forming small cell networks (SCNs) using the spectrum reuse policy to meet the increasing demand (Samarakoon et al., 2016a).
