

China s energy storage power station investment plan

Overview

China plans to nearly double its new energy storage capacity to 180 GW by 2027, under a state-backed industry roadmap that foresees 250 billion yuan (US\$35 billion) of investment: Current capacity, dominated by lithium-ion batteries, stood at 95 GW as of June. How many pumped storage power stations did China approve?

The country approved 110 pumped storage power stations with a total installed capacity of 148.901 gigawatts, which is 2.8 times the capacity approved during the "13th Five-Year Plan" period. China has completed 70.90 % of the total capacity target of 210 gigawatts for key implementation projects during the "14th Five-Year Plan".

Will China double its energy storage capacity by 2027?

Our Standards: The Thomson Reuters Trust Principles. China is looking to almost double its so-called new energy storage capacity to 180 gigawatts (GW) by 2027, according to an industry plan announced by authorities on Friday.

What is China's energy storage strategy?

In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. 2023 was a breakthrough year for industrial and commercial energy storage in China.

How big is China's energy storage capacity?

Sign up here. Current installed new energy storage capacity, which is made up mostly of lithium-ion battery storage, was 95 GW as of June, the regulator, the National Energy Administration, said in August. China has raced ahead of its energy storage targets in the past.

How pumped storage and new energy storage are developing in central

The development of pumped storage and new energy storage in Central China shows a trend of coexistence and complementarity, which is mainly due to the great importance of energy structure optimization and power system regulation capacity in the region.

Why is new energy storage important in China?

SINGAPORE (ICIS)-New energy storage plays a crucial role in ensuring power balance in China, especially in effectively addressing the intermittent issues of new energy generation. It helps alleviate the dual pressures of power supply security and consumption.
