

# Combined photovoltaic solar panels

# **Overview**

PVT collectors combine the generation of solar electricity and heat in a single component, and thus achieve a higher overall efficiency and better utilization of the than conventional PV modules. Photovoltaic cells typically reach an electrical efficiency between 15% and 20%, while the largest share of the (65% - 70%) is converted into hea.

Hybrid solar panels, or PVT solar panels, are a combination of solar photovoltaic panel and solar thermal panels in one module. A hybrid solar PVT module can therefore produce both electricity and heat simultaneously

# **Combined photovoltaic solar panels**

# The performance of a combined solar photovoltaic (PV) and

Photovoltaic devices (PV) can directly convert parts of the solar spectrum, but a significant part is absorbed as heat. In order to remedy this, a number of combined ...
