

Communication equipment base station includes

Overview

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and .

The hardware components of a base station include antennas, radios, and processing units, while the software components include network management software and control software. Antennas are a key component of a base station, providing the interface between the wireless device and the base station.
