

Companies that build energy storage power stations in the Middle East

Overview

Which energy storage solutions will be the leading energy storage solution in MENA?

Electrochemical storage (batteries) will be the leading energy storage solution in MENA in the short to medium terms, led by sodium-sulfur (NaS) and lithiumion (Li-Ion) batteries.

Why do we need energy storage systems?

This necessitates reinforcing the power network, firming capacities, and enhancing the grids' stability and flexibility. Increasing the deployment of intermittent energy sources without integrating energy storage systems may jeopardize the power system stability and security of supply.

Can energy storage be integrated in MENA?

Although the energy storage market in MENA is bound to grow, several barriers exist that hinder the integration of ESS and the ramping up of investments. Financial, regulatory, and market barriers need to be addressed via policy tools that lay the foundations for an evolved power market to integrate the deployed ESS.

How ESS can help reduce electricity curtailment?

ESS can play a central role in reducing curtailment by ensuring that the generated electricity is stored for when it is needed, while providing flexible ramp-up. ESS can also provide capacity firming, energy arbitrage, frequency regulation, among other ancillary services6.
