

Container rural base station size

Overview

What is an example of a rural transfer station?

For example, a rural transfer station could be located near one of the service area's larger towns and sized to take waste from all waste generators within about 30 miles. As an example, two 50-ton-per-day transfer stations might each serve six small communities.

Where are the best transfer stations for rural & tribal areas?

Transfer stations serving rural or tribal areas tend to be small. They are optimally located within a reasonable driving time from the service area's largest concentration of homes and businesses.

What is a containerized mobile substation?

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas with high pollution, high humidity, extreme temperatures or sand storms. Containers are easy to transport and fast to install, by reducing foundation works as well as installation and commissioning effort on site.

What is the scope of supply for containerized Mobile substations?

The scope of supply covers the complete assembly which may include: Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas of high pollution, and humidity.

Do urban transfer stations need space?

All transfer stations must address issues such as noise, odors, dust, vectors, traffic, and litter. Urban transfer stations, however, frequently lack the key component that suburban and rural facilities use to mitigate these problems: space.

What types of substations are used in rural transmission & distribution?

The typical system may include substations for voltage transformation, sectionalizing, distribution, and metering a number of times between generation and utilization. This bulletin covers rural transmission and distribution with air-insulated, outdoor substations 345 kV (phase-to-phase) and below.
