

Cooperation model for largescale energy storage projects

Overview

••We propose an option game model for multi-agent cooperation investment in energy storage projects.

How can a cooperative investment model improve energy storage performance?

By leveraging the spatiotemporal complementarities of storage demands, the approach improves system performance and output tracking. A cooperative investment model accommodates various energy storage technologies, reducing costs and enhancing efficiency.

What are the operational intricacies of shared energy storage systems?

The operational intricacies of shared energy storage systems have garnered substantial scholarly interest within the domain of energy storage sharing. Researchers typically approach the management of these systems by formulating it as an optimization problem, which is generally categorized as either single-level or bi-level in nature [11, 12].

What is a cooperative investment model?

A cooperative investment model accommodates various energy storage technologies, reducing costs and enhancing efficiency. Case studies show the model strengthens station alliances, optimizes energy storage, and offers a cost-effective solution for renewable energy integration and increased hydrogen production profitability.

How can shared storage improve energy systems?

By integrating shared storage into these projects, system operators can better manage their energy resources, improve grid stability, and support the transition to renewable energy sources. This model fosters participants cooperation and investment, leading to more sustainable and resilient energy systems. 6. Conclusions.

Does a shared model improve the utilization efficiency of energy storage?

However, due to the absence of supporting policies for this function, the current utilization efficiency of energy storage is low. The shared model proposed in this paper can significantly improve the utilization efficiency and economic benefits of energy storage.

How do we integrate storage sharing into the design phase of energy systems?

We adopt a cooperative game approach to incorporate storage sharing into the design phase of energy systems. To ensure a fair distribution of cooperative benefits, we introduce a benefit allocation mechanism based on contributions to energy storage sharing.
