

Cryogenic Energy Storage System

Overview

Cryogenic energy storage (CES) is the use of low temperature (cryogenic) liquids such as liquid air or liquid nitrogen to store energy. The technology is primarily used for the large-scale storage of electricity. Following grid-scale demonstrator plants, a 250 MWh commercial plant is now under construction in.

ProcessWhen it is cheaper (usually at night), electricity is used to cool air from the atmosphere to -195 °C using the to.

United KingdomIn April 2014, the UK government announced it had given £8 million to .

TransportBoth liquid air and liquid nitrogen have been used experimentally to power cars. A liquid air powered car called was built between 1899.

United KingdomIn October 2019, Highview Power announced that it planned to build a 50 MW / 250 MWh commercial plant in . Construction began in November 2020, with commercial.
