

# Czech container refrigerated power generation

#### **Overview**

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

What is the Czech energy mix?

While the goal of EU funds is to support a sustainable low-carbon-emission economy and ensure energy security by utilizing alternative energies, the Czech approach is different. As described in the State Energy Policy, the future Czech energy mix will be primarily based on nuclear power with a goal of reaching 50% of the energy supply with nuclear.

What energy sources can keep refrigerated containers' cooling systems running?

Here is an overview of different energy sources that can keep refrigerated containers' cooling systems running: At ports or storage facilities, operators typically connect reefers to shore power. This provides a stable electricity supply for continuous operation. Some refrigerated containers feature built-in generators.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

Why is Czech energy-accumulation so expensive?

According the report, the main reason is the regulatory framework biased in

favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of available energy-accumulation technology is perfect yet, and cost-effectiveness can be reached under specific conditions only.

Do refrigerated containers have generators?

Some refrigerated containers feature built-in generators. These allow for independent power generation during transit or in areas without external power access. Operators can use diesel generators in remote locations or when stationary power is unavailable. These portable units provide energy to keep the cooling system running.
