

Development direction of communication high-voltage battery station cabinet

Overview

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

What is a Blvd threshold for a communication base station?

Assume the rated voltage of a communication base station's battery is 48V, with the BLVD threshold set to 42V. When the mains power fails and the battery starts supplying power, the power system continuously monitors the battery voltage through the voltage detection circuit.

How many high-voltage batteries will be built in 2025?

From April 2025, up to 50,000 batteries per year will be built in an initial expansion phase. Depending on how the market develops, this capacity is to be expanded to up to 100,000 high-voltage batteries by 2030. At over 35 metres high, the new building is the tallest production building at the site.
