

# Does battery installation require a battery cabinet

#### **Overview**

Yes, a battery cabinet is essential for fire-safe storage because it helps prevent fires, explosions, and property damage. Proper storage keeps batteries upright, away from flammable materials, heat, and direct sunlight, reducing risks like short circuits or thermal runaway. Can a battery be installed in a computer room?

Sometimes they are installed in the same room as the UPS (i.e., electrical equipment room). Local or regional codes may dictate whether batteries are permitted in an electrical room. Smaller UPS systems (e.g, up to 250 kVA) are commonly installed directly in the computer room along with their respective battery cabinets.

Why do you need a battery cabinet?

Ease of use is one of the principle selling points for battery cabinets. It is convenient to service the equipment when the UPS and the battery (ies) are right next to each other. Conversely, it is inconvenient to have to go to a separate room when open-rack batteries are installed.

Can you put a battery in an electrical room?

Local or regional codes may dictate whether batteries are permitted in an electrical room. Smaller UPS systems (e.g, up to 250 kVA) are commonly installed directly in the computer room along with their respective battery cabinets. The UPS and/or battery cabinets might be configured to look like standard computer equipment racks.

Do battery cabinets need to be locked?

Battery cabinets must enclose the batteries behind locked doors accessible only to authorized personnel. As long as the cabinets are kept locked, they can be located in a computer room or other rooms accessible by non-battery technicians.

What are the safety requirements related to batteries & Battery rooms?

Employers must consider exposure to these hazards when developing safe work practices and selecting personal protective equipment (PPE). That is where Article 320, Safety Requirements Related to Batteries and Battery Rooms comes in.

Do lithium ion batteries need a battery room?

Lithium-ion batteries need a battery room if their capacity exceeds 20 kWh, according to fire codes. NFPA 855 outlines ventilation and safety requirements. Store batteries at a temperature of 59°F (15°C). Also, refer to NFPA 70E for further safety guidelines, and ensure proper exhaust ventilation for off-gas events.
