

Dual Battery Solar System

Overview

Here's an in-depth DIY (do it yourself) write up on a "simple" dual battery and solar system for your overland rig on a budget. It includes layout, component selection, required sizing calculations, and recommended tools. I've researched and compared with alternate methods to end up at this design. After building a.

Why would you need a dual battery system in your car?

It's all because ice melts. When you take a 3 week camping trip with a cooler full.

To start on dual battery systems, the first decision you'll commonly see is Automatic Charging Relay (ACR) versus DC-DC charger. Without.

Occasionally we'll be in a great location and have time to kill so we'll just stay another day. In that case solar is paramount. Sure we could run the engine but that burns fuel.

The first calculation you need to make is how to size your battery bank. How much power do you really need?

You'll need to sum up the current draw of the electronics you currently power (and leave some room for what you may power in the future). Then multiply by how.

Dual Battery Solar System

PART 1: How to CONNECT a solar panel to a dual-battery system

Aside from having free energy to power your camping fridge, a solar panel can also be used to maintain your auxiliary battery for optimum service life. With this in mind, ...
