

EU rooftop photovoltaic panel number

Overview

What is the EU solar rooftop standard (EPBD)?

(pveurope By HCN) The newly enacted EU Solar Rooftop Standard, part of the Energy Performance of Buildings Directive (EPBD), is set to dramatically expand rooftop solar capacity across Europe. According to SolarPower Europe, this standard could drive the installation of 150 to 200 gigawatts (GW) of additional rooftop solar between 2026 and 2030.

What is the European Union's solar rooftop standard?

The European Union's Solar Rooftop Standard, part of the Energy Performance of Buildings Directive, could prompt the installation of 150-200 GW of rooftop photovoltaics, powering around 56 million European homes. The directive mandates new buildings to be solar-ready, aiming for widespread solar adoption.

Will the EU rooftop solar standard drive more rooftop solar capacity?

According to our analysis, the EU Rooftop Solar Standard within the EPBD could drive the installation of 150 to 200 GW of additional rooftop solar capacity in the EU between 2026 and 2030. Critically, the Solar Rooftop Standard will unlock the potential of large rooftops such as those installed on offices, commercial buildings, or car parks.

Will the EU solar rooftop standard unlock the potential of large rooftops?

Critically, the EU Solar Rooftop Standard will unlock the potential of large rooftops. The Energy Performance of Buildings Directive (EPBD) officially entered into force.

How will the EU solar rooftop standard affect public buildings?

Public buildings like schools and hospitals will be particularly empowered by the EU Solar Rooftop Standard, which ensures they will benefit from solarreduced energy expenses and dependence on fossil fuels.

How big is rooftop solar in Europe?

Total rooftop solar capacity in Europe stood at more than 170 GW at the end of 2023 and is expected to grow to 355 GW by the end of 2027. In addition to the obligatory solar installations under the Solar Standard, the growth of rooftop solar on homes is also likely to increase, as citizens seek to shield themselves from fossil price volatility.
