#### **Overview**

Storage lowers costs and saves money for businesses and consumers by storing energy when the price of electricity is low and later discharging that power during periods of high demand. The industry provides good-paying jobs across the U.S. and is central to the new American manufacturing renaissance. Does energy storage provide a suite of General Electricity Services?

regulatory proceedings in Hawaii, and others.CONCLUSION0606 CONCLUSIONAs illustrated in this report, energy storage is capable of providing a suite of thirteen general electricity services to the electricity grid, and the further downstream from central generation stations energy storage is.

Why is energy storage important?

Energy storage is an enabling technology, which – when paired with energy generated using renewable resources – can save consumers money, improve reliability and resilience, integrate generation sources, and help reduce environmental impacts. Explore energy storage resources Investment in energy storage created long-term reliability.

Does energy storage save money?

Energy storage can save operational costs in powering the grid, as well as save money for electricity consumers who install energy storage in their homes and businesses.

Why do we invest in energy storage?

Our investment in energy storage evolves with our grid, creating long-term benefit and reliability for years to come. Energy storage is a critical hub for the entire grid, augmenting resources from wind, solar and hydro, to nuclear and fossil fuels, to demand side resources and system efficiency assets.

Does energy storage add value to the electricity grid?

ehind the meter, at the distribution level, or at the transmission level. Energy storage d ployed at all levels on the electricity system can add value to the grid. However, customer-sited, behind-the-meter energy storage can technically provide the largest number of services to the electricity grid at large (see Figure ES2)—even.

Does energy storage provide backup power?

Energy storage can provide backup power during disruptions. The same concept that applies to backup power for an individual device (e.g., a smoke alarm that plugs into a home but also has battery backup), can be scaled up to an entire building or even the grid at large.
