

Energy Storage Power Station Fire Protection Manufacturer

Overview

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.* Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

What is the fda241 fire protection system?

The FDA241 is the ideal solution for early detection of electrical fires. In addition to controlling the automated extinguishing system, the fire protection system triggers all other necessary battery management system control functions.

Why should power plants be fire protected?

Modern society relies on a continuous power supply. All power plants, whether they be wind farms, thermal power plants or hydro power plants, must be fire protected to minimize the risk of interrupted operation. We help keep people safe and provide peace of mind to operations.

What is energy storage & how does it work?

As the use of these variable sources of energy grows – so does the use of energy storage systems. Energy storage is a key component in balancing out supply and demand fluctuations. Today, lithium-ion battery energy storage systems (BESS) have proven to be the most effective type and, as a result, installations are growing fast.

Energy Storage Power Station Fire Protection Manufacturer

Fire Safety for the Energy Sector , Everguard Fire Safety

Safeguarding electrical grids, power stations, and transmission facilities. Fire suppression systems designed for flammable and volatile materials. Every industry has unique fire safety ...
