

# **Energy Storage Project Commissioning Plan**

### **Overview**

### What is a commissioning plan?

Commissioning is a required process in the start-up of an energy storage system. This gives the owner assurance that the system performs as specified. A Commissioning Plan prepared and followed by the project team can enable a straightforward and timely process, ensuring safe and productive operation following handoff.

What are the sections of energy storage project guide?

The guide is divided into three main sections: construction and installation, commissioning, and operation & maintenance. It covers various aspects such as foundation construction, battery and inverter installation, wiring, system testing, monitoring, fault handling, and preventive maintenance. 1. Energy Storage Project Construction 2.

What are the steps in energy storage installation?

The main steps are: to build the foundation, install the energy storage cabinets, install the battery and inverter, and wire it all. During the commissioning of an energy storage system, which tests does the team perform?

System-wide joint commissioning.

Do energy storage systems need a safety assessment?

Safety Assessment: As more energy storage systems have become operational, new safety features have been mandated through various codes and standards, professional organizations, and learned best practices. The design and commissioning teams need to stay current so that required safety assessments can be performed during commissioning.

Why is risk mitigation important for energy storage systems?

Global incidents underscore the critical need for proactive risk mitigation. The Hazardous Mitigation Analysis (HMA) and mandatory UL 9540 and 9540A testing are crucial components of the design and commissioning process for any reasonably sized Energy Storage System (ESS).

How do you test an energy storage system?

Measure voltage of the emergency power supply. Calibrate SOC parameters of the battery management system. Test charging and discharging times of the energy storage unit. The C&I Energy Storage: Construction, Commissioning, and O&M Guide is a valuable resource. It is for those deploying and managing energy storage systems.

### **Energy Storage Project Commissioning Plan**

# Battery Energy Storage System (BESS) Commissioning and ...

We provide pre-procurement test plans as well as provide onsite or remote testing for BESS projects for performance qualifications to use cases, commissioning and warranty checkup ...
