

Energy storage projects seeking funding

Overview

What energy storage projects are offered?

The energy storage projects offered include direct current distribution systems, CES, anti-idling retrofit and pole utility solutions. Among the latest innovations is the extremely fast EV charging solution with a storage system for the highest efficiency and a MEG for emergency use. Headquarters: Saint Louis, US.

Are energy storage projects a good investment?

Investors and lenders are eager to enter into the energy storage market. In many ways, energy storage projects are no different than a typical project finance transaction. Project finance is an exercise in risk allocation. Financings will not close until all risks have been catalogued and covered.

How do energy storage projects make money?

Energy storage projects provide a number of services and, for each service, receive a different revenue stream. Distributed energy storage projects offer two main sources of revenue. Capacity payments from the local utility are one.

Why should we invest in energy storage?

By providing low-cost funding for breakthrough storage solutions, we help bring clean electricity to millions of people when they need it. The rapid expansion in intermittent sources of clean energy such as wind and solar power must be matched by investments in energy storage to ensure communities get electricity when they need it most.

Are energy storage projects a project finance transaction?

In many ways, energy storage projects are no different than a typical project finance transaction. Project finance is an exercise in risk allocation. Financings will not close until all risks have been catalogued and covered. However, there

are some unique features to energy storage with which investors and lenders will have to become familiar.

Where are the energy storage projects being built?

The energy storage projects will be located at three existing SCE power substations: 225 MW at Springvale Substation in Big Creek-Ventura, 200 MW at Hinson Substation in the Los Angeles Basin, and 112.5 MW at Etiwanda Substation in the Los Angeles Basin.
