

# **Eritrea building solar energy utilization system**

#### **Overview**

### Does Eritrea have solar power?

Eritrea's weather, characterized by long sunny days throughout the year, makes it suitable for harnessing solar power. Data from the wind and solar monitoring stations installed in many parts of Eritrea show that the country has a great potential, around 6 kwh/m2 of solar energy.

Where can I find information on renewable power capacity & generation of Eritrea?

You can find information on the renewable power capacity and generation in Eritrea on the homepage of IRENA.org. Climatescope 2019 lists the clean energy policies and investments for Eritrea.

What are the benefits of solar energy in Eritrea?

The government of Eritrea has been making efforts to promote the use of alternative sources of energy, especially solar energy, to mitigate the problems associated with the use of fossil fuel. A major benefit of solar energy is that it does not pollute the environment and saves money in the long run even if its installation cost is quite high.

What are the current energy sources in Eritrea?

In Eritrea, the current energy sources are animal power and biomass resources. An aggressive energy transition would move away from these sources to a situation where households, services and farming activities use a range of sustainable and diversified energy sources.

How does Eritrea provide electricity to remote areas?

Eritrea is also embarking upon an extensive rural electrification programme. The primary goal is to provide electricity to rural areas from the national grid where possible, and from decentralised systems (wind, solar, gensets, etc.) in more remote areas.

### Can Eritrea lead the way to a sustainable future?

The world is at the tipping point for bolder steps and immediate aggressive actions. Eritrea, a country with negligible emission contribution, can potentially lead the way to secure a safe and sustainable future by taking a different path from previous development trajectories.
