

# Flow battery operation characteristics

#### **Overview**

A flow battery, or redox flow battery (after ), is a type of where is provided by two chemical components in liquids that are pumped through the system on separate sides of a membrane. inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circulate in their respective spaces.

☐Flow batteries are electrochemical cells, in which the reacting substances are stored in electrolyte solutions external to the battery cell ☐Electrolytes are pumped through the cells ☐Electrolytes flow across the electrodes ☐Reactions occur atthe electrodes ☐Electrodes do not undergo a physical change
