

Georgia s new energy charging power supply

Overview

Will Georgia Power build a battery energy storage system?

Georgia Power has started construction on four battery energy storage systems across the state. The projects will add 765 megawatts of generating capacity, enough to power approximately 573,750 homes. Two facilities will be built near Air Force bases, one at a retired coal plant, and another will expand an existing facility.

Does Georgia Power have a demand charge?

Georgia Power's standard residential rate doesn't include a demand charge. Instead, it leaves the power company more reliant on how much energy is used. That's a potential challenge for utilities that want to grow. Per capita residential electric consumption in the U.S. was once dependably on the rise.

How much does Georgia Power cost?

It's \$7.90 multiplied by the highest kilowatt usage in any 60-minute period during the billing month. That could mean a new \$55 fee on average, based on Georgia Power's estimate that typical home peak demand is about 7 kilowatts a month.

Does Georgia Power support Customer-Sited solar?

Georgia Power is also committed to supporting customer-sited generation resources to meet the state's growing energy needs. The 2025 IRP includes two customer expansions of BESS programs including enhancements to the Customer Connected Solar Program and launching a new Customer-Sited Solar Plus Storage Pilot.

What is Georgia Power's Energy Strategy?

As part of today's filing, Georgia Power is proposing a comprehensive strategy to both transform Georgia's energy sources and help to ensure that the state's network of transmission lines and grid infrastructure continues to deliver

reliable energy to Georgians - both today and in the future.

How much does North Georgia electric charge per kWh?

The average electricity rate for North Georgia Electric consumers is 10.72 cents per kilowatt hour (¢/kWh).
