

German Valley Power Storage Device

Overview

How can traditional power plant sites contribute to German and European energy supply?

With this storage facility, traditional power plant sites can make an exemplary contribute to the German and European energy supply. Please click on the image to zoom At the sites of the power plants in Hamm and Neurath, an intelligent, net-worked storage system is being built.

Why is Germany a good place to study energy storage?

Germany boasts a dense landscape of world-leading research institutes and universities active in the energy storage sector. They work closely together with industry to bring innovations to the market. The federal government supports research and development in the energy storage, hydrogen, fuel cell, and electric vehicle sectors.

Is Germany a good place to invest in energy storage?

While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub.

How much does Germany spend on EV and stationary battery research?

Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions.

How does Germany support the energy transition?

The German population supports the goals of the energy transition. Improved energy self-sufficiency in private households and commercial operations

enjoys widespread acceptance. More than 1.7 million solar power plants, with a total capacity of more than 45 GWp, have been installed in Germany over the past 25 years.

Where is RWE storing lithium-ion batteries?

RWE commissioned a large-scale storage facility in December 2024 and February 2025 in North Rhine-Westphalia. A total of 690 blocks of lithium-ion batteries were installed at the Neurath and Hamm sites. By opting for the sites of its existing power plants, RWE is able to take advantage of the synergy of combined technologies.
