

Germany s power storage solution

Overview

Does Germany need energy storage systems?

While around 254 terawatt-hours (TWh) of electricity were generated from renewable energy in Germany in 2022, 600 TWh of electricity are expected to come from renewable sources by 2030. Germany is particularly dependent on a market ramp-up of energy storage systems, especially battery storage systems. What role do energy storage systems play?

.

What is the business model for a German energy storage system?

Therefore the business model for a German energy storage system is slightly different to business models in other markets. The key business models in Germany comprise: Improvement of reliability of electricity supply for industrial production.

Will Germany add more power storage projects in 2023?

Germany will likely add many more projects in the coming months, as the federal government increasingly focuses on storage solutions. In December 2023, the Federal Ministry for Economic Afairs and Climate Action (BMWK) published its "Power Storage Strategy" to accelerate the development of new capacities.

How important is electricity storage in Germany?

Electricity storage systems will become increasingly important as the share of variable renewables increases further and other flexibility options (such as grid expansion) reach their limits. In Germany, most important storage options include pumped hydro (9 GW)) and battery storage (11 GW - 18 GWh storage capacity).

How will storage impact Germany's energy future?

Storage will be key to enabling Germany to better leverage its abundant wind and solar generation, which accounted for over 60% of total electricity generation in the first half of 2024. Currently, on very windy and sunny days, grid operators often resort to curtailment.

What is the power storage strategy?

In December 2023, the Federal Ministry for Economic Afairs and Climate Action (BMWK) published its "Power Storage Strategy" to accelerate the development of new capacities. At the EU level, additional storage is also high on the agenda. Below is an overview of directives and regulations aimed at promoting development:
