

How much does Japanese energy storage battery cost

Overview

The research firm found the system costs excluding taxes to have increased 26.5% from 49,000 yen/kWh in FY2022 to 62,000 yen/kWh in FY2023. The majority of the increase was driven by the increase in the cost of the batteries themselves. How big is Japan's battery storage market?

In the commercial space, Japan's battery storage market was valued at USD 593.2 million in 2023 and is projected to reach USD 4.15 billion by 2030. While commercial installations currently dominate revenues, industrial adoption is expected to scale faster. Utility-scale storage is also gaining ground.

Does Japan need battery energy storage?

A Growing Need for Energy Storage The increasing generation of renewables on the Japanese grid has led to various support policies and CAPEX subsidy schemes to support the deployment of grid-scale Battery Energy Storage (BESS).

How much battery power does Japan have?

As of March, Japan had 0.23 GW of grid-connected BESS, according to METI. By comparison, China has 75 GW and the U.S. has installed nearly 26 GW of battery storage capacity, according to the Energy Institute.

Why should Japan invest in storage batteries?

Energy Security: Storage batteries are key to stabilizing Japan's energy system. Given Japan's limited natural resources and dependence on imports, combined with its vulnerability to natural disasters, investing in reliable and sustainable energy solutions is critical.

How much do Japanese companies spend on battery storage projects?

Since December 2023, companies have announced investments of at least \$2.6 billion in Japanese battery storage projects, according to calculations by Reuters. That includes \$677 million in spending by Japanese real estate firm

Hulic (3003.T) announced in January and \$1.3 billion by trading house Sumitomo (8053.T) last year.

How big is Japan's energy storage capacity?

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. Japan had 1,671MW of capacity in 2022 and this is expected to rise to 10,074MW by 2030. Listed below are the five largest energy storage projects by capacity in Japan, according to GlobalData's power database.

How much does Japanese energy storage battery cost

Battery storage and renewables: costs and markets to 2030

Battery electricity storage is a key technology in the world's transition to a sustainable energy system. This study shows that battery storage systems offer enormous deployment and cost ...
