

Hybrid energy for the communication base station in Vaduz

Overview

Can small base stations conserve grid energy in hybrid-energy heterogeneous cellular networks?

Abstract: Dense deployment of small base stations (SBSs) within the coverage of macro base station (MBS) has been spotlighted as a promising solution to conserve grid energy in hybrid-energy heterogeneous cellular networks (HCNs), which caters to the rapidly increasing demand of mobile user (MUs).

What is a hybrid energy storage system?

Hybrid energy storage systems using battery energy storage has evolved tremendously for the past two decades especially in the area of car manufacturing either in a fully hybrid electric car or hybrid car that use battery energy storage with internal petrol combustion engine.

What is unique about this research based on hybrid energy storage?

The interesting or unique about this research compared to other researchbased on hybrid energy storage is to apply hybrid energy storage in the poor grid and bad grid scenarios which are not discussed in another research before.

How many power conversion modules should a base station have?

The sum of the load current of the base station is at 6667 W and the rectifier efficiency is at 96% where the capacity required is 6944 W. The capacity of a single AC/DC power conversion module is 3000 W, and thus two power conversion modules should be configured.

How much power does a base station use?

Suppose the load power consumption of a base station is 2000 W by using the lithium-ion battery and the corresponding load current is approximately 41.67A (for simplification, here the 2000W power consumption includes the power consumption of the temperature control equipment divided by 48V per

battery module).

What would be the contribution of a battery-based energy conservation model?

The contribution would be the initial development of an energy conservation model based on grid availability between 8 hours to 16 hours under the poor grid and bad grid scenarios based on energy-efficient systems such as hybrid energy storage between the lead-acid battery and the lithium-ion battery.
