Overview

What are auxiliary power converters?

Medha's Auxiliary Power Converters deliver stable, high-efficiency power for railway systems. Engineered for durability and optimised for performance, our converters ensure uninterrupted auxiliary power supply in trains. Explore our advanced power solutions.

Can auxiliary power systems save energy?

Auxiliary power systems do more than just supply power to loads, they can also help trains realize major energy savings. Our new business model helps Transit providers reach an optimized energy-efficiency level by achieving shared energy-saving performance targets.

What is auxiliary power system?

Our auxiliary power system uses silicon carbide (SiC) power switches that can operate at higher temperatures and have lower switching losses. Our solutions can quickly identify the fault module through built-in self-diagnosis. Weighing less than 15 kg, they are lightweight and can be replaced quickly.

Why do auxiliary converters need to be energy-efficient?

Auxiliary converters need to incorporate energy-efficient designs, as their continuous operation can significantly impact the overall energy consumption of the train. Common auxiliary loads consists of a mix of blowers, pumps, compressors, lighting, fans, HVAC systems, battery charging, and auxiliary power needed for other subsystems.

What is a dual inverter?

Our Dual Inverter range combines different power electronic technologies into one compact package. A single unit can control and drive two electric motors - providing unrivalled functionality while delivering cost reductions and bringing flexible packaging solutions that are lighter, smaller and easier to install. Dual

Why do auxiliary power systems need to be regulated?

Auxiliary power systems provide the constant, regulated power needed to power these auxiliaries. However, supply voltage dips, electromagnetic interference, complex assembly integration, and reduced reliability can all compromise the effective operation of on-board auxiliary power systems. Regulating external factors
