

# Is it necessary to have energy storage in Laos photovoltaic power generation

### **Overview**

How many solar power plants are there in Laos?

However, by the end of last year, only eight solar power projects and four biomass power plants were in operation, with an installed generation capacity of 116 MW, representing just 1% of the country's total electricity production. As of early 2023, Laos produced power from 76 hydropower dams, with another 43 still under construction.

Should Laos manage its own power grid?

A better path forward would be for Laos to manage its own power grid to increase the efficacy of its growing electricity exports, along with much-needed revenue, and help develop its domestic grid for more solar power on its path to net zero in 2050. Tim has been working in energy markets in the Asia-Pacific region for more than ten years.

Should Laos rely on hydropower?

At first glance, it would appear that Laos' overreliance on hydropower would be beneficial in terms of energy independence and a negligible carbon footprint, but challenges remain. On the one hand, hydropower is considered a clean energy source.

How much does electricity cost in Laos?

To its credit, state-run electricity company Electricité du Laos (EDL) is trying to encourage more solar power development by offering a tariff rate of USD 0.08 per kilowatt-hour (kWh). That's higher than the rate for hydropower-generated electricity, which ranges from USD 0.05 to 0.06 per kWh.

How much electricity does Lao PDR export?

As there were many power plants in the Lao PDR generating electricity for export in 2018, the export figure reached 26,708 gigawatt-hours (GWh), the equivalent of 2.65 Mtoe. This amounted to more than half of all electricity

consumed in the country and 77% of total hydropower generation.

Why does Laos suffer from energy instability?

However, Laos generally suffers from energy instability because most of its power plants are owned by international businesses and generate electricity for export. It even has two electricity grids, one for exporting power and one for domestic usage.
