

# Is it necessary to have energy storage with solar power in Brazil

#### **Overview**

Brazil's new 2025 energy storage regulations create urgent opportunities for businesses to pair solar with lithium batteries. Here's why: Overloaded grids cause interconnection delays for DG systems. Batteries enable off-grid operation during peak congestion, ensuring uninterrupted power. Could solar power reduce diesel consumption in Brazil?

Brazilian farmers have been expanding their solar energy capacity and testing batteries as a storage solution, in a bid to make electricity supplies more predictable and potentially reduce diesel consumption, according to growers and experts.

Could solar power be the future of Brazil?

Solar energy also shows big promise. In 2019, about five terawatt-hours of power from the sun's rays were injected into the national energy grid. 2 Studies suggest that by developing just its sunniest regions, Brazil's output could hit 500 terawatt-hours a year, enough to meet 90 percent of its 2019 power demand.

Should small businesses invest in solar power plants in Brazil?

The potential for solar energy production in Brazil varies greatly from state to state, due to its extensive north-south stretch (more than 4,300 km). Small businesses or farms rarely decide to invest in solar power plants due to the high cost of equipment.

Does Brazil have solar energy?

Solar energy has great potential in Brazil, with the country having one of the highest levels of insolation in the world at 4.25 to 6.5 sun hours/day. As of 2019, Brazil generated nearly 45% of its energy, or 83% of its electricity, from renewable sources. For example, 60% of Brazil's electricity generation came from renewable hydropower.

Are energy storage products coming to Brazil?

Holu's Costa observed batteries were prominent during the Intersolar South America trade show held in São Paulo at the end of August 2024. She added, hundreds of manufacturers are bringing energy storage products to Brazil.

Does Brazil have a good energy supply?

Brazil is known worldwide for its ample share of renewable sources in its energy production. According to the Brazilian energy balance, 32.9% of the domestic energy supply in 2015 was from renewable sources, such as hydropower, sugar cane products and wind (EPE, 2016). If we consider only the electricity supply, the numbers are even more positive.

#### Is it necessary to have energy storage with solar power in Brazil

# Improving grid reliability in Brazil - pv magazine International

Alexander Gomes, COO of Matrix Energia, discusses grid reliability issues in Brazil and the important role energy storage systems are playing for energy providers and ...
