

## **Israel Wind Power Storage**

#### **Overview**

Which energy storage systems are available in Israel?

The only utility-scale energy storage system in Israel, as of 2021, is a single Pumped Hydro Storage (PHS) system, rated at 300 MW (Shikun Binui, Electra, 2016). This system helps operators to regulate the frequency during times of low demand and high solar generation, by acting as a load.

How many wind turbines are there in Israel?

In Israel's northern mountainous region are located wind turbines. The Israeli company, Enlight operates the Genesis Wind complex: 34 General Electric turbines which can produce 180MW. 5 additional turbines can be added raising capacity to 207MW. Emek HaBacha provides 109MW.

Could a decentralized electricity grid help Israel survive a war?

But its experience in adopting renewable energy and building energy storage solutions has put it at the forefront of Israel's ambition to create a more resilient and decentralized electricity grid that might better cope in times of war.

Can Israel meet its energy demands with solar panels?

The Weizmann Institute estimated that Israel can meet 32% of its energy demands if it covered roof tops with solar panels. In 2023 Israel required all non private buildings cover their rooftops with solar panels. In Israel's northern mountainous region are located wind turbines.

How does integration affect the frequency stability of the Israeli power system?

The frequency stability of the Israeli power system is expected to be challenged as additional renewable energy sources are integrated. Currently in Israel, the integration of generation units and storage is not directed by policies that clearly consider how their distribution affects the frequency

stability of the system.

Does the Israeli power system have the resources to maintain frequency stability?

One main conclusion is that the Israeli power system already has the required resources to maintain frequency stability in case a large generation unit is lost. However, to maintain a reliable system, policy makers should encourage that the existing and additional storage will contribute to frequency regulation when there is a risk of instability.

#### **Israel Wind Power Storage**

## Wind powers Israel's largest renewable energy project yet

Founded in 2008, Enlight develops, finances, constructs, owns, and operates utility-scale renewable energy projects across the three largest renewable segments today: ...
