

Kiribati New Energy Wind and Solar Power Generation and Energy Storage

Overview

What is Kiribati integrated energy roadmap?

The resulting Kiribati Integrated Energy Roadmap (KIER) highlights key challenges and presents solutions to make Kiribati's entire energy sector cleaner and more cost effective. As a small, remote island state, Kiribati is highly dependent on imported energy supply. Electricity is one of the government's largest expenditures.

How is Kiribati developing?

Another significant area for development is Kiribati's energy infrastructure. With a high reliance on diesel fuel for electricity, the country is looking to shift toward renewable energy sources as part of its broader efforts to combat climate change and ensure energy security.

Does Kiribati need electricity?

As a small, remote island state, Kiribati is highly dependent on imported energy supply. Electricity is one of the government's largest expenditures. Yet the current fossil fuel-based power system is inadequate to meet future demand.

Does Kiribati need a new transportation system?

With the country heavily reliant on fishing and agriculture, the Kiribati government has prioritised projects aimed at upgrading its infrastructure and energy systems to support sustainable economic development. One of the most urgent needs in Kiribati is the modernisation of its transportation infrastructure.

What is the Kiritimati Island energy roadmap?

One notable example of international involvement is the Kiritimati Island Energy Roadmap, a project supported by the Pacific Region Infrastructure Facility (PRIF) that aims to achieve 100 per cent renewable energy for

Kiritimati Island by 2025. This is part of Kiribati's broader strategy to integrate renewable energy into its national energy mix.

What challenges does Kiribati face?

Kiribati is facing critical infrastructure and energy challenges, which offer significant opportunities for investment. With the country heavily reliant on fishing and agriculture, the Kiribati government has prioritised projects aimed at upgrading its infrastructure and energy systems to support sustainable economic development.
