

Lead-acid battery cabinet transportation specifications

Overview

If you are shipping batteries, they should be in a UN 1G, 4G or 1H2 non-metal container, and secured to prevent movement, with non-conductive plastic strapping and stretch wrap. Metal restraints should never be used, as they may generate sparks and fires that could result in injuries or accidents. How are lead acid batteries transported?

The transportation of lead acid batteries by road, sea and air is heavily regulated in most countries. Lead acid is defined by United Nations numbers as either: The definition of 'non-spillable' is important. A battery that is sealed is not necessarily non-spillable.

What is a lead acid battery container?

Lead Acid Battery Container - for safe battery storage and transportation. The Battery Transport & Storage (BTS) Container was purposely designed as a lead acid battery container, for the regulation compliant, safe and environmentally responsible storage and transportation of used lead acid batteries.

What are lead acid batteries used for?

Batteries collected mainly include car batteries and other automotive application but also include lead acid batteries used for solar, UPS and other industrial applications. The popularity of this service and the BTS Containers is growing every year. Why Wood Pallets Shouldn't Be Used For Transporting Lead Acid Batteries?

.

Are lead acid batteries spillable?

Most Sealed Lead Acid batteries using Gel or Absorbent Glass Matt (AGM) technology is classed as non-spillable while even a 'sealed' standard lead acid battery with liquid electrolyte is spillable.

Are lead acid batteries dangerous?

Lead acid batteries are classified as a dangerous good and used or waste lead acid batteries are also classified as a hazardous waste. As a result their storage and transportation is controlled by several different regulations. You can find here, a summary of the Australian storage and transport regulations for lead acid batteries.

What is a non-spillable lead acid battery?

Non-spillable lead acid batteries (those that use Gel or Absorbent Glass Matt technology) require the same packaging as those filled with acid with the following differences: No acid proof liner is required. The box must be clearly marked "Non-spillable battery".

Lead-acid battery cabinet transportation specifications

Shipping lead acid batteries - BatteryGuy Knowledge Base

The information detailed in this article covers all known requirements, however all carriers have their own rules and regulations regarding how lead acid should be shipped.
