

# Lithium battery packs are connected in series

#### **Overview**

Connecting multiple lithium batteries into a string of batteries allows us to build a battery bank with the potential to operate at an increased voltage, or with increased capacity and runtime, or both.

Lithium battery banks using batteries with built-in Battery Management Systems (BMS) are created by connecting two or more batteries together to support a.

The primary function of a BMS is to ensure that each cell in the battery remains within its safe operating limits, and to take appropriate action to prevent the.

The primary purpose of a BMS is to interrupt the charge and discharge process if cell and battery voltage, cell and battery current and cell and BMS temperatures.

Lithium batteries are connected in series when the goal is to increase the nominal voltage rating of one individual lithium battery - by connecting it in series strings.

### Lithium battery packs are connected in series

#### Can lithium battery cells be connected in series?

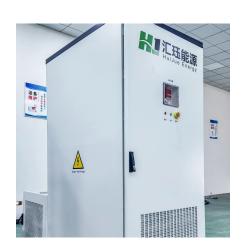

One of the most common queries is, "Can lithium battery cells be connected in series?" Well, let's dive right into this topic and break it down. First off, yes, lithium battery cells ...
