

Mixed installation of battery cabinet and distribution cabinet

Overview

How do you reinstall a battery cabinet?

Reinstall the left side panel on the left-most battery cabinet after interconnection. Push the third battery cabinet into position, align with the seismic anchoring (if any), level the battery cabinet, and interconnect with the other battery cabinets as described in step 2, step 3, and step 5.

How do you level a battery cabinet?

Remove the side panels that are adjacent to the other battery cabinets. Push the right-most battery cabinet into position. For seismic anchoring, ensure that the rear seismic bracket connects to the rear anchors. Lower the levelling feet until they connect with the floor - use a bubble-leveler to ensure that the cabinet is level.

How do I choose a battery combiner box?

When deciding between using a commercially available battery combiner box or a 'do-it-yourself' box built from off-the-shelf parts, it is important to choose the solution that best suits each project. For many installers, the easiest option is to use an inverter-specific battery combiner box.

Do I need a separate DC power distribution combiner?

In some cases, installers may choose to use a separate DC power distribution combiner for the battery banks, solar charge controllers, and inverters, such as Midnite Solar's MNBCB 1000. The MNBCB 1000 has an amp rating of 1000 and is an option for larger inverters with a 250 amp breaker.
