

Mongolian wind power energy storage system supplier

Overview

Does Mongolia have wind power?

The US National Renewable Energy Laboratory (NREL) has found that Mongolia has enormous wind power potential, with good wind resource identified in the east and isolated Gobi desert area of the south. According to NREL, if all windy areas in the country were developed a staggering 1100 GW of capacity could be realized.

Does Mongolia have a power grid?

The transmission system in Mongolia is currently being reinforced to improve poor grid connectivity between the south and north areas of CES. The grid owner's Power Grid Master Plan includes a planned 220 kV network that completely connects Russia, Mongolia and China, allowing power interchange among these countries.

Will Mongolia's power demand double by 2020?

Due to industry expectations of significant growth in the domestic mining sector, the government of Mongolia expects its total current power demand of approximately 1 GW to almost double by 2020.
