

Myanmar Energy Storage Power Generation

Overview

Most of the country's rural population relies on biomass, such as wood, as their primary energy source. [1] Myanmar has abundant energy resources, particularly hydropower and natural gas. [2] In 2017, electricity production was dominated by hydropower, which accounted for 74.7% of total generation. [3]Overview's energy sector is characterised by low per capita energy consumption and a limited rate, with an estimated 65% of the population lacking access to the national grid as of 2019. Most of the count.

had a (TPES) of 16.57 in 2013. Electricity consumption was 8.71 . 65% of the primary energy supply consists of biomass energy, used almost exclusively (97%) in the residen.

Hydropower resources are estimated to be about 40 GW at a capacity factor of 0.40, giving a total yearly hydropower generation capacity of about 140 TWh. Installed hydropower capacity as of 2011 was 1.54 GW with a t.
