

National policy on communication base station inverters

Overview

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Could remote inverters destabilize power grids?

Energy security experts warn that coordinated remote manipulation of these devices could destabilize power grids and trigger widespread blackouts, particularly as Chinese-made inverters now control a substantial portion of renewable energy capacity in the United States and Europe.

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.

What are inverters used for?

These devices are also used in batteries, heat pumps, and electric vehicle chargers. Although inverters are designed for remote access to facilitate updates and maintenance, utility companies typically implement firewalls to block direct communication with China and safeguard their systems.

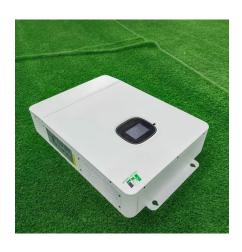

National policy on communication base station inverters

Investigators Discover Hidden Communications Devices in US ...

U.S. energy-sector forensic teams have begun disassembling Chinese-manufactured solar inverters and grid-scale batteries after discovering undocumented 4G/LTE modules and other ...
