

Nauru energy storage photovoltaic project installation

Overview

The project will finance the installation of a 6MW ground mounted solar PV system, an 11 kV substation including feeders for the solar farm, for the BESS, for the diesel generators (to be relocated by NUC) and transmission linkages, the balance of system, a monitoring and control system integrated with NUC existing system and associated facilities (including boundary fences, office, water storage and reticulation). How will ADB support the Nauru solar power development project?

ADB also provided GoN support to prepare a Feasibility Study for the recommended Nauru Solar Power Development Project which will comprise of a 6 megawatt PV plant coupled with a 5 megawatt / 2.5 megawatt-hour battery energy storage system coupled with a SCADA installation.

Who will implement solar project in Nauru?

The executing agency will be the Department of Finance and Sustainable Development. The implementing agency for solar component of project will be the Nauru Utilities Corporation (NUC). NUC will establish a project management unit within their existing organisational structure to implement the project.

How does Nauru get its energy?

Nauru predominantly sources its energy through diesel power generators. About 5% of its current energy demand is sourced from renewable energy, of which all is from solar power photovoltaic (PV) installations. A 500-kW ground-mounted solar installation was commissioned in 2016, and a number of residences have rooftop solar PV installations.

Who owns Nauru electricity?

The Nauru electrical network is owned and operated by Nauru Utilities Corporation (NUC), a state-owned enterprise, established under the Nauru Utilities Corporation Act of 2011. NUC is responsible for energy generation and energy distribution, and water supply. Nauru predominantly sources its energy

through diesel power generators.

How will Nauru's solar power system work?

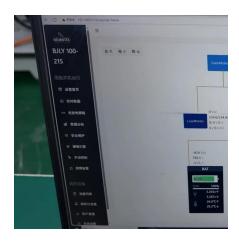

The system will be fully integrated and automated with the existing diesel generation (17.9 MW installed capacity currently manually operated) to optimize solar energy use, to enable optimal BESS charging/discharging and to provide optimal shut off of the diesel engines. This will reduce Nauru's over reliance on diesel for power generation.

How many kV is a 1000 KW PV installation in Nauru?

A 1,000 kW PV installation is under construction. The electrical network comprises 11kV, 3.3KV and LV overhead lines. Asian Development Bank (ADB) provided Government of Nauru (GoN) a transactional technical assistance TRTA to prepare a Nauru power expansion plan.

Nauru energy storage photovoltaic project installation
