

North Asia Distributed Energy Storage System

Overview

Let's face it – North Asia's energy landscape is changing faster than a Siberian winter storm. With countries like China, Japan, and South Korea pushing aggressive renewable energy targets, distributed energy storage systems (DESS) have become the region's not-so-secret weapon. What will the energy storage industry look like in East Asia & Pacific?

Additionally, in many of these areas the industry is likely to adopt a more distributed approach to grid development, using more local power generation and microgrid systems. We expect that the largest energy storage market in the East Asia & Pacific region will be China.

What is the market for energy storage in South Asia?

The market for energy storage in the South Asia region is dominated by India. (See Chart 3.4). In India, several key factors are driving the market for energy storage, perhaps most notably the ambitious National Solar Mission.

Can energy storage technologies help drive development in emerging economies?

Energy storage technologies hold significant potential to help drive development in emerging economies by improving the quality of the electricity supply and facilitating the effective integration of renewable energy.

What is a distributed energy storage system (DESS) & microgrid?

In areas with relatively unstable grids that experience frequent outages, distributed energy storage systems (DESS) and microgrids will become increasingly popular to protect customers from outages. These systems will be the most popular for commercial and industrial facilities where even short outages can result in significant economic losses.

Where will the new energy storage capacity be deployed?

As shown in Chart 3.8, a significant portion of the new energy storage capacity expected to be deployed in Latin America and the Caribbean will likely come from remote power systems. Most of this new capacity is anticipated to be in physical island microgrid systems.

Are advanced energy storage systems worth it?

The technology continues to prove its value to grid operators around the world who must manage the variable generation of solar and wind energy. However, the development of advanced energy storage systems (ESS) has been highly concentrated in select markets, primarily in regions with highly developed economies.

North Asia Distributed Energy Storage System

Energy Storage Trends and Opportunities in Emerging Markets

This section includes an overview of the stationary energy storage value chain, lists components in energy storage systems, and describes applications of energy storage in the context of ...
