

Philippines grid-side energy storage

Overview

Is a grid-scale battery storage project happening in the Philippines?

Grid-scale battery storage project in the Philippines. Image: Wartsila. The Philippines Department of Energy (DOE) and regulators are considering changing rules governing ownership of grid-connected energy storage systems.

Will the Philippines change the rules governing grid-connected energy storage systems?

Philippines Department of Energy and regulators considering changing rules governing ownership of grid-connected energy storage systems.

Why are energy storage systems so expensive in the Philippines?

Due to the fact that the Philippines are prone to natural disasters such as flooding and typhoons, energy storage systems must be built to withstand extreme weather. This may increase the upfront cost of energy storage systems.

What is the future of energy storage in the Philippines?

Under the Philippine energy scenario, peak demand is seen growing by 5.3 percent annually until 2028. Energy storage is stepping into the spotlight of the country's green transition, with more companies making bold investments to unlock its game-changing potential.

How much battery storage capacity will the Philippines have?

As the Philippines gears up for the entry of more renewables into the grid, the government anticipates close to 2,000 MW of battery storage capacity to complement them. According to DOE data as of end-March, ESS projects with a combined capacity of 594 MW are committed to come online over the next three years.

What is the best energy storage technology in the Philippines?

At this time, lithium-ion batteries are the primary advanced energy storage technology in use, though lead acid batteries -- mostly imported from China -- have been used in off-grid storage applications for at least a decade. Frequency regulation is in its early stages in the Philippines.
